Conceptual and Logical Design

The online Beauty store database needs to keep track of orders for its inventory. When a customer places orders, the system must record the order and order items. The system must update the available quantity on hand to reflect that the by product(s) has been sold. When an employee processes orders, the system must confirm that the ordered items are in stock. The online store needs to keep track of customers and employees, too. The system must update the available quantity on hand to reflect that the by product(s) has been sold. Each team creates your store, database and sell your own products.

One customer may or may not place many orders.

One order must be placed by one and only one customer.

One order must contain one or more product.

One product may or may not be in many orders.

One employee may process one or more orders.

One order must be processed by one and only one employee.

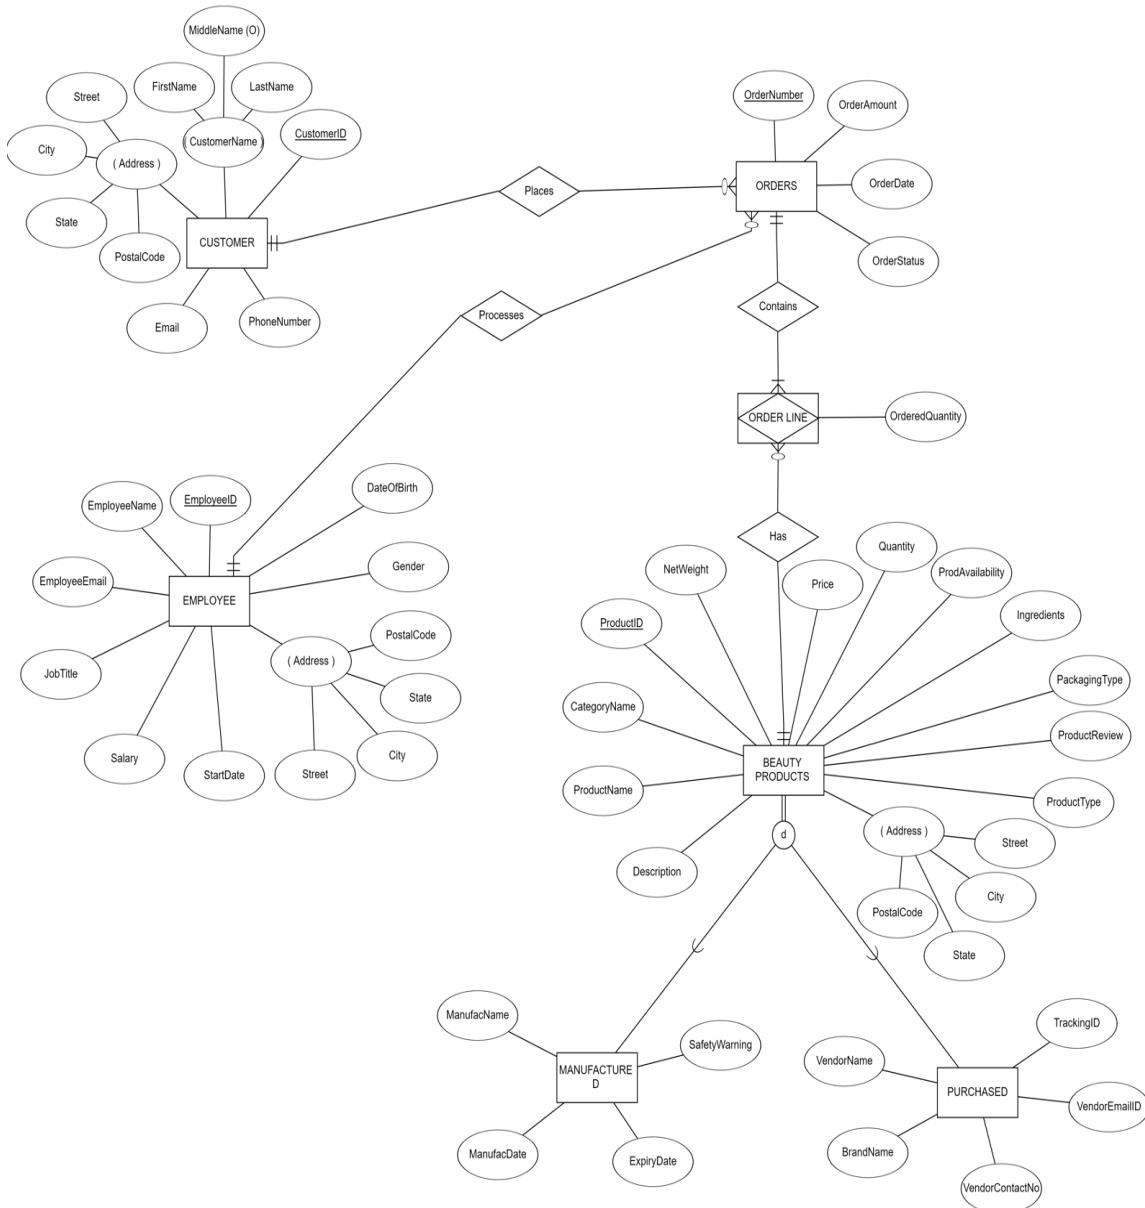

One product must be either manufactured or purchased.

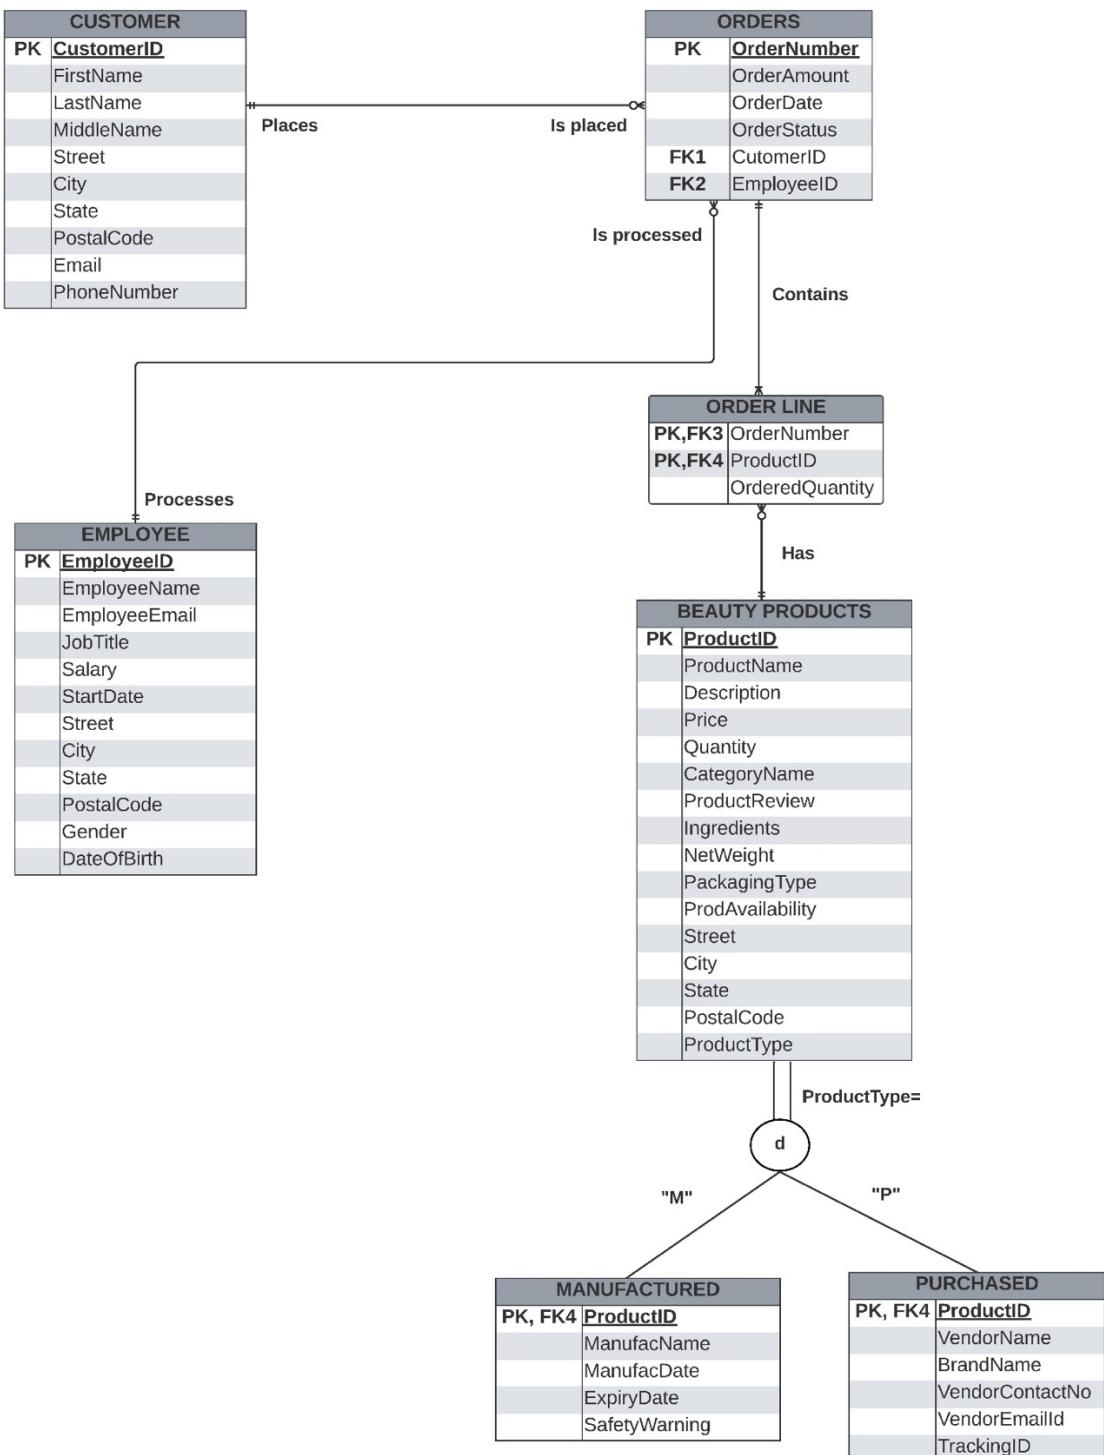

1. Identify entity types and relationship types. Fill out the following relationship matrix.

| | Customer | Orders | Product | Manufactured | Purchased | Employee |
|--------------|----------|--------------|---------|--------------|-----------|-----------|
| Customer | --- | Is placed | --- | --- | --- | --- |
| Orders | Places | --- | Has | --- | --- | Processes |
| Product | --- | Contains | --- | --- | --- | --- |
| Manufactured | --- | --- | Must be | --- | --- | --- |
| Purchased | --- | --- | Must be | --- | --- | --- |
| Employee | --- | Is processed | --- | --- | --- | --- |

2. Draw an ER/EER diagram using software tools includes 1) entity types, 2) relationship types, 3) keys, 4) attributes, and cardinality constraints (must show participation).

ER Diagram

3. Database Logical Design: Map the ER diagram to a relational database schema indicating the relation's name, primary key and foreign key. Add appropriate additional attributes by yourself.

Table Name: **CUSTOMER**

| | | | | |
|------------------------|-----------|------------|----------|-------------|
| <u>CustomerID</u> (PK) | FirstName | MiddleName | LastName | Street |
| City | State | PostalCode | Email | PhoneNumber |

Table Name: **ORDERS**

| | | | |
|-------------------------|-------------------------|-------------|-------------|
| <u>OrderNumber</u> (PK) | OrderDate | OrderAmount | OrderStatus |
| <u>CustomerID</u> (FK1) | <u>EmployeeID</u> (FK2) | | |

Table Name: **ORDER LINE**

| | | | | |
|-----------------|--------------------------|------------------------|--|--|
| OrderedQuantity | <u>OrderNumber</u> (FK3) | <u>ProductID</u> (FK4) | | |
|-----------------|--------------------------|------------------------|--|--|

Table Name: **BEAUTY PRODUCTS**

| | | | | |
|-----------------------|------------------|---------------|-------------|------------|
| <u>ProductID</u> (PK) | CategoryName | ProductName | Description | Price |
| Quantity | ProdAvailability | ProductReview | Ingredients | NetWeight |
| PackagingType | Street | City | State | PostalCode |
| ProductType | | | | |

Table Name: **MANUFACTURED**

| | | | | |
|------------------------------|-------------|-------------|------------|---------------|
| <u>MProductID</u> (FK4) (PK) | ManufacName | ManufacDate | ExpiryDate | SafetyWarning |
|------------------------------|-------------|-------------|------------|---------------|

Table Name: **PURCHASED**

| | | | | |
|------------------------------|------------|-----------|-----------------|---------------|
| <u>PProductID</u> (FK4) (PK) | VendorName | BrandName | VendorContactNo | VendorEmailID |
| TrackingID | | | | |

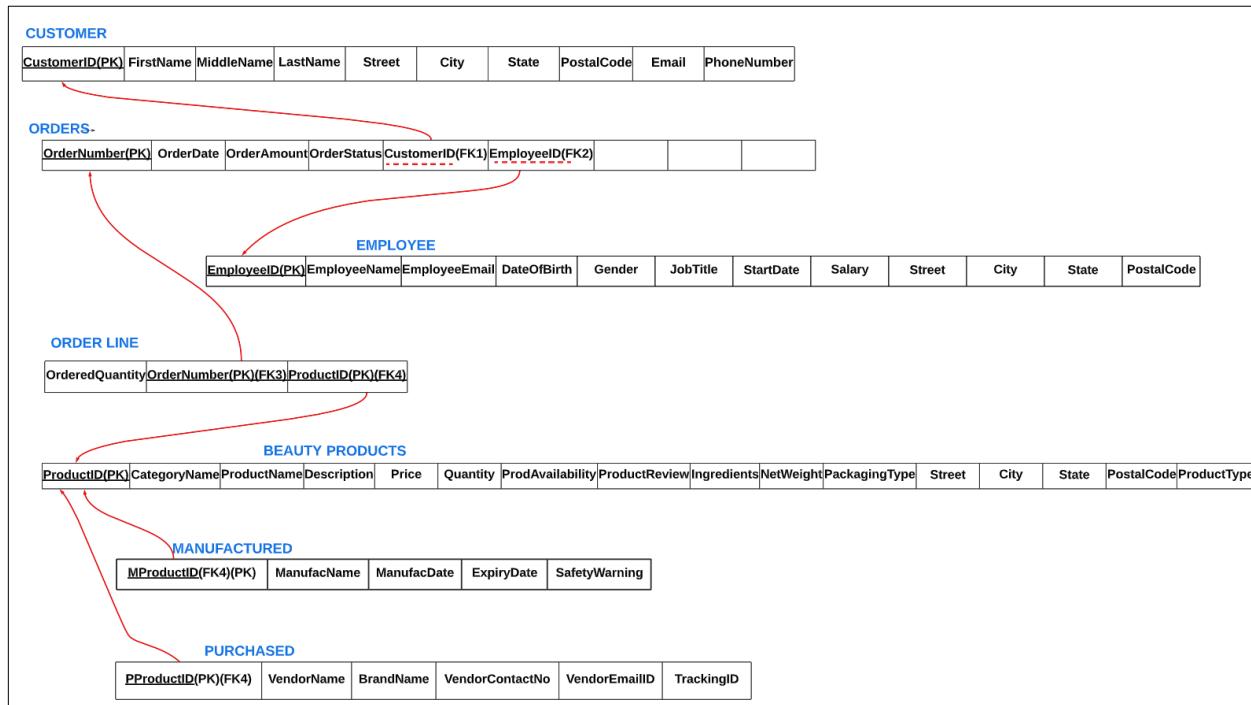

Table Name: **EMPLOYEE**

| | | | | |
|-----------------------|--------------|---------------|-------------|--------|
| <u>EmployeeID(PK)</u> | EmployeeName | EmployeeEmail | DateOfBirth | Gender |
| JobTitle | StartDate | Salary | Street | City |
| State | PostalCode | | | |

4. Establish join paths for the above relational database using the referential integrity by drawing arrow lines between the above tables. Indicate all the foreign keys (FK).

F.K. → P.K. (Foreign Key refers to Primary Key)

Database Logical Design:

Referential Integrity:

F.K. → P.K.

ORDERS.CustomerID → CUSTOMER.CustomerID

ORDERS.EmployeeID → EMPLOYEE.EmployeeID

ORDERLINE.OrderNumber → ORDERS.OrderNumber

ORDERLINE.ProductID → BEAUTYPRODUCTS.ProductID

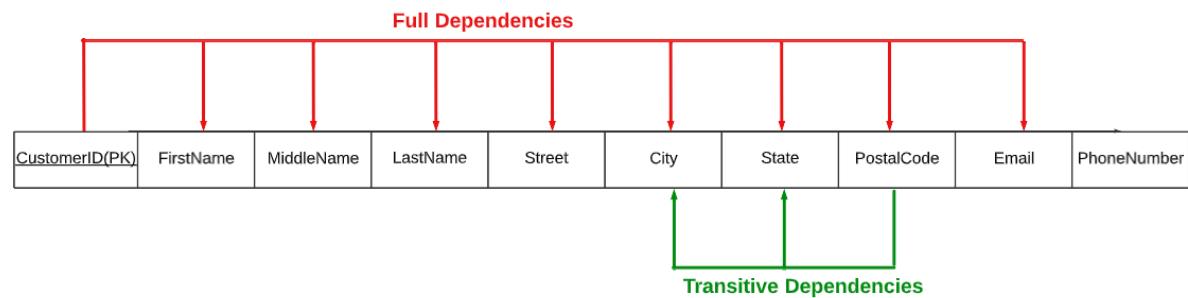

MANUFACTURED. MProductID → BEAUTYPRODUCTS.ProductID

PURCHASED.PProductID → BEAUTYPRODUCTS.ProductID

Function Analysis:

5. Do function analysis for each of your tables Attribute A -> Attribute B (Determinant attribute(s) Determines Dependent Attribute(s))

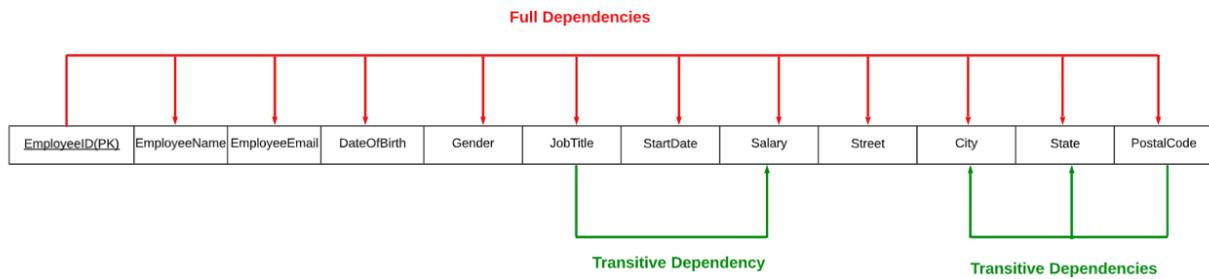

CUSTOMER:

CustomerID → FirstName, MiddleName, LastName, Street, City, State, PostalCode, Email, PhoneNumber (Full Dependencies)

PostalCode → City, State (Transitive Dependencies)

EMPLOYEE:

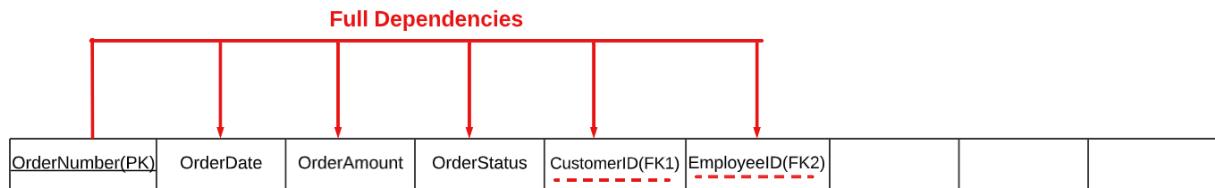

EmployeeID → EmployeeName, EmployeeEmail, DateOfBirth, Gender, JobTitle, StartDate, Salary, Street, City, State, PostalCode (Full Dependencies)

JobTitle → Salary (Transitive Dependency)

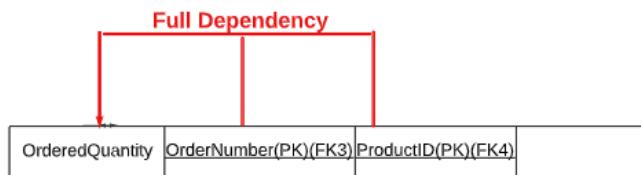

PostalCode → City, State (Transitive Dependencies)

ORDERS:

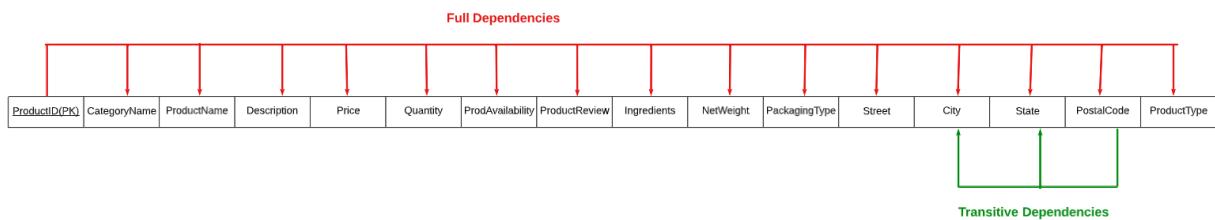

OrderNumber → OrderDate ,OrderAmount, OrderStatus, CustomerID, EmployeeID (Full Dependencies)

ORDERLINE:

(OrderNumber, ProductID) → OrderedQuantity (Full Dependencies)

BEAUTY PRODUCTS:

ProductID → ProductName, CategoryName, Description, Price, Quantity, ProductType, ProductReview, ProdAvailability, Ingredients, NetWeight, PackagingType ,ProductType(Full Dependencies)

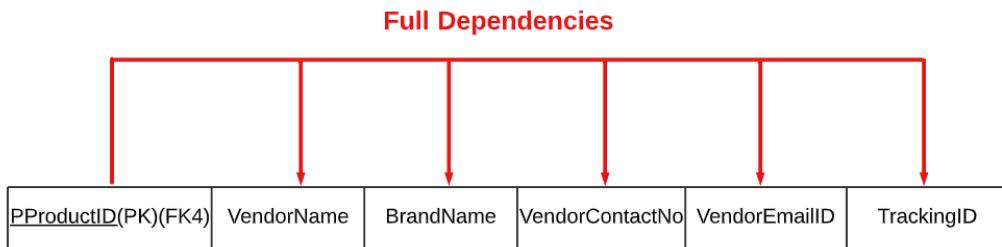

PostalCode → City, State (Transitive Dependencies)

MANUFACTURED:

$MProductID \rightarrow ManufacName, ManufacDate, ExpiryDate, SafetyWarning$ (Full Dependencies)

PURCHASED:

$PProductID \rightarrow VendorName, BrandName, VendorContactNo, VendorEmailID, TrackingID$ (Full Dependencies)

Normalization Forms:

6. Show all the normalized tables and indicate the normalization form for each of your tables.

| Table Name | 1NF | 2NF | 3NF |
|-----------------|-----|-----|-----|
| CUSTOMER | ✓ | ✓ | |
| EMPLOYEE | ✓ | ✓ | |
| BEAUTY PRODUCTS | ✓ | ✓ | |
| MANUFACTURED | ✓ | ✓ | ✓ |
| PURCHASED | ✓ | ✓ | ✓ |
| ORDER | ✓ | ✓ | ✓ |
| ORDERLINE | ✓ | ✓ | ✓ |

Beauty Products e-store Database

Project-2|Group 6

Name of the Team Members and their Roles and Responsibilities:

Team Leader- Bhumika Suvagia

As a team leader for our e-store beauty product database design and development project, the primary responsibility is to oversee the project from start to finish. Communicating within the team to gain a deep understanding and requirements of the project to ensure that the project is completed on time.

Database Developers- Ankita Savaliya and Akanksha Khaire

We all shared a similar responsibility to make the project work. As a team, we finalized the requirements and created the necessary infrastructure to support the project. This includes creating tables, functions, objects, and stored procedures to ensure that the project has a solid foundation. Also create documentation to ensure that the project is well-documented.

By sharing similar responsibilities, we worked together to achieve the common goal of delivering a successful project.

Introduction (Akanksha Khaire)

Our database design model is developed for an e-store that sells beauty products to customers around the world. The purpose of this database is to keep track of the employees, beauty products inventory, orders, customers, and suppliers of the beauty products. We aim to improve the efficiency of the e-store's operations by providing an organized and secure platform to manage the flow of information.

The e-store is divided into categories of beauty products, each with a distinct name and number. Each category has its own set of products, including their name, description, price, and image. We keep records of the number of products available in stock, the number of the items sold and the number of products on order from suppliers. The e-store has multiple suppliers from whom it sources its products. Some of the products are manufactured and some products are purchased from the vendors. We keep track of the name, tracking information, and products supplied by each supplier.

Customers can create accounts and place orders for the products they want to purchase. We keep track of each customer's name, contact information, shipping and billing addresses, and order history. Each order has a unique order number, date, and status. We also keep track of the amount for each order.

Functionalities:

The database also includes functionalities for the e-store's administrators. They can manage the inventory, update product information, process orders, and track the status of orders. They can also manage the suppliers, update supplier information, and track the status of supplier orders. Additionally, the database has functionalities for generating reports on sales, inventory, and customer data.

Users:

Users of the database include end-users, such as customers who shop on the e-store, and administrators who manage the operations of the e-store. The database is also used by the e-store's developers and designers, who oversee the design and implementation of the e-store's website and backend systems.

Purpose:

Our database design model for the beauty products e-store aims to improve the efficiency and organization of the e-store's operations by providing a secure and organized platform for managing inventory, orders, customers, and suppliers. The database includes functionalities for managing data, generating reports, and ensuring data integrity. It is used by end-users, administrators, developers, and designers to support the e-store's operations

SQL DDL (Database Definition Language):

CUSTOMER TABLE: (Bhumika Suvagia)

VIEWS:

Create View for Customers and Orders: (Bhumika Suvagia)

SQL Statement:

-- Create the view

```
CREATE VIEW CustomerOrders AS
```

```
SELECT c.CustomerID, c.FirstName, o.OrderNumber, o.OrderDate, o.OrderAmount
```

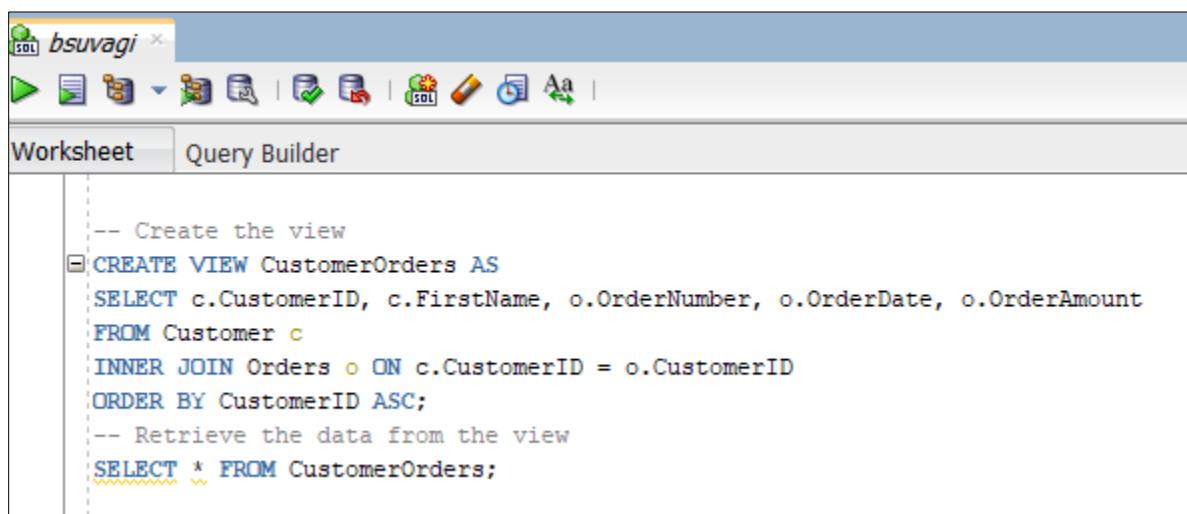

```
FROM Customer c
```

```
INNER JOIN Orders o ON c.CustomerID = o.CustomerID
```

```
ORDER BY CustomerID ASC;
```

-- Retrieve the data from the view

```
SELECT * FROM CustomerOrders;
```

The screenshot shows a SQL query editor interface with a toolbar at the top and a main workspace below. The workspace contains the following SQL code:

```
-- Create the view
CREATE VIEW CustomerOrders AS
SELECT c.CustomerID, c.FirstName, o.OrderNumber, o.OrderDate, o.OrderAmount
FROM Customer c
INNER JOIN Orders o ON c.CustomerID = o.CustomerID
ORDER BY CustomerID ASC;
-- Retrieve the data from the view
SELECT * FROM CustomerOrders;
```

SQL Output:

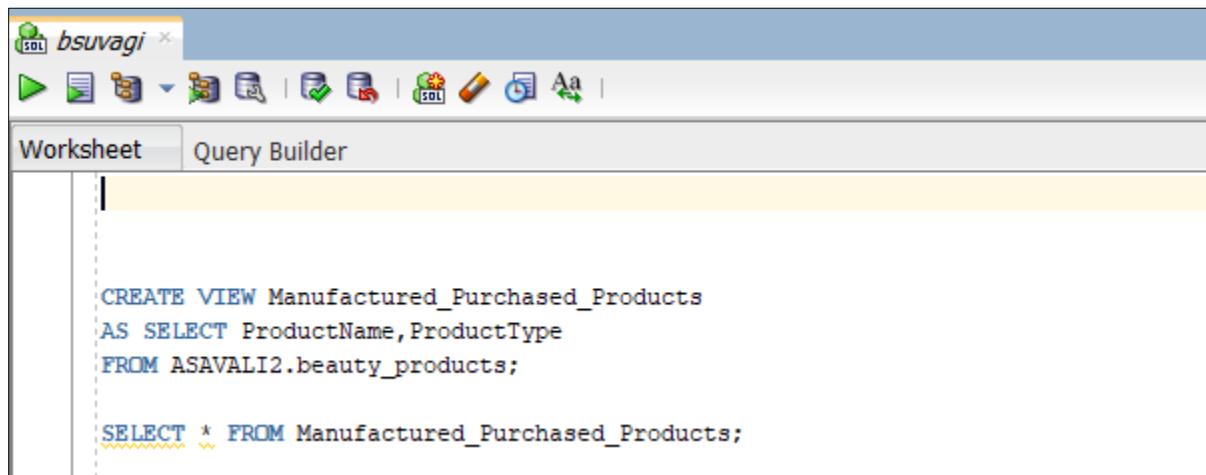

| | CUSTOMERID | FIRSTNAME | ORDERNUMBER | ORDERDATE | ORDERAMOUNT | |
|---|------------|------------|-------------|----------------|-------------|--|
| 1 | | 1 Bhumika | | 1001 22-MAR-15 | 500 | |
| 2 | | 1 Bhumika | | 1004 15-FEB-20 | 1000 | |
| 3 | | 2 Ankita | | 1002 01-APR-17 | 750 | |
| 4 | | 3 Akanksha | | 1003 22-MAY-15 | 125 | |
| 5 | | 4 Sara | | 1005 03-MAY-19 | 250 | |

Create view for Manufactured and Purchased Products: (Bhumika Suvagia)

SQL Statement:

```
CREATE VIEW Manufactured_Purchased_Products  
AS SELECT ProductName,ProductType  
FROM ASAVALI2.beauty_products;
```

```
SELECT * FROM Manufactured_Purchased_Products;
```

The screenshot shows a SQL Workbench interface with a title bar 'bsuvagi'. The main area has two tabs: 'Worksheet' (selected) and 'Query Builder'. The 'Worksheet' tab contains the following SQL code:

```
CREATE VIEW Manufactured_Purchased_Products  
AS SELECT ProductName,ProductType  
FROM ASAVALI2.beauty_products;  
  
SELECT * FROM Manufactured_Purchased_Products;
```

SQL Output:

| PRODUCTNAME | PRODUCTTYPE |
|-------------------|-------------|
| 1 Mascara | P |
| 2 Facial Cleanser | M |
| 3 Hair Spray | P |
| 4 Sunscreen | M |
| 5 Lipstick | M |

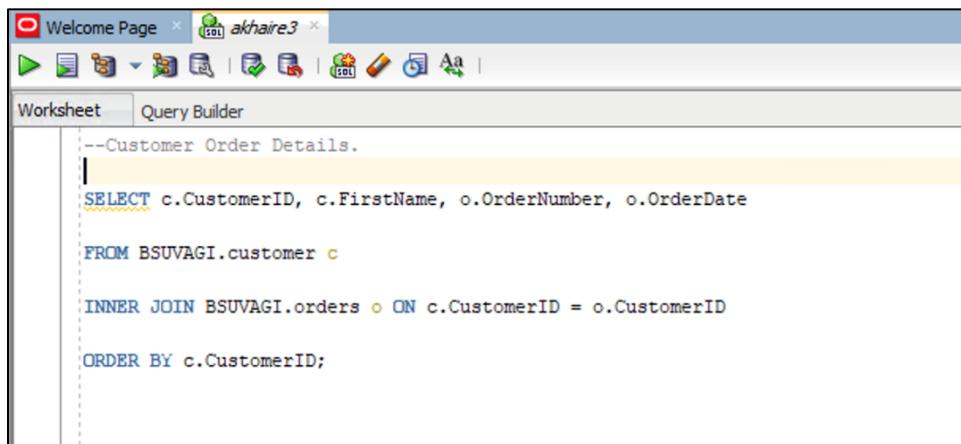

SQL Test Statements:

1. Display the customer order information which includes customer firstname, order number and order date. (Akanksha Khaire)

SQL Statement: (Using Inner Join and Order by)

--Customer Order Details.

```
SELECT c.CustomerID, c.FirstName, o.OrderNumber, o.OrderDate  
FROM BSUVAGI.customer c  
INNER JOIN BSUVAGI.orders o ON c.CustomerID = o.CustomerID  
ORDER BY c.CustomerID
```

The screenshot shows the SSMS interface with the query window open. The code in the window is:

```
--Customer Order Details.  
|  
SELECT c.CustomerID, c.FirstName, o.OrderNumber, o.OrderDate  
FROM BSUVAGI.customer c  
INNER JOIN BSUVAGI.orders o ON c.CustomerID = o.CustomerID  
ORDER BY c.CustomerID;
```

SQL Output:

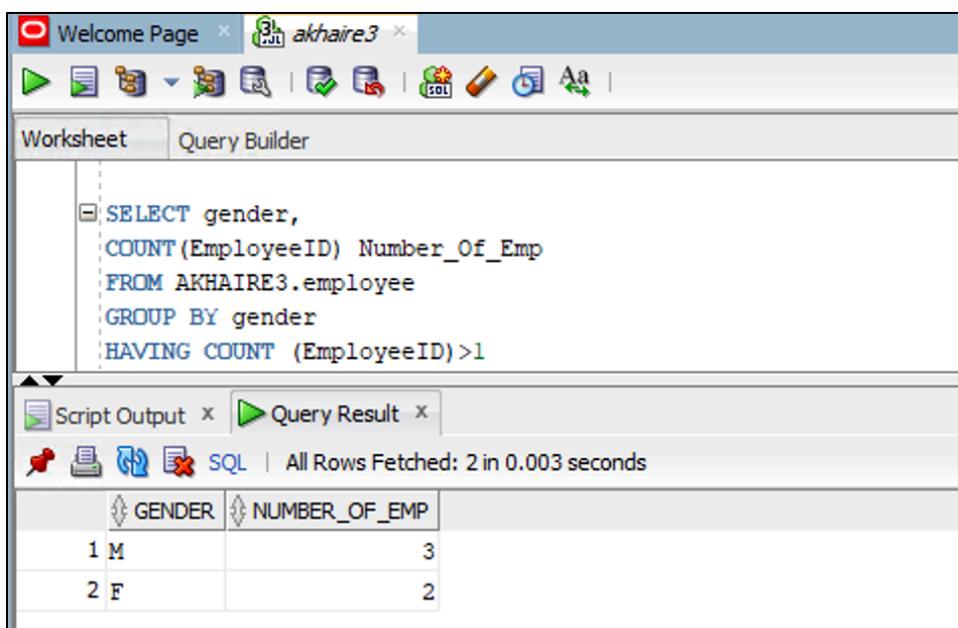

| | CUSTOMERID | FIRSTNAME | ORDERNUMBER | ORDERDATE | |
|---|------------|-----------|-------------|-----------|--|
| 1 | 1 | Bhumika | 1001 | 22-MAR-15 | |
| 2 | 1 | Bhumika | 1004 | 15-FEB-20 | |
| 3 | 2 | Ankita | 1002 | 01-APR-17 | |
| 4 | 3 | Akanksha | 1003 | 22-MAY-15 | |
| 5 | 4 | Sara | 1005 | 03-MAY-19 | |

2.Count the number of male and female employees who process the orders. (Akanksha Khaire)

SQL Statement: (Using Group by, Count(), and Having)

```
SELECT gender,
COUNT(EmployeeID) Number_Of_Emp
FROM AKHAIRE3.employee
GROUP BY gender
HAVING COUNT (EmployeeID)>1
```

SQL Output:

The screenshot shows the SQL Server Management Studio interface. The top bar has tabs for 'Welcome Page' and 'akhaire3'. Below the toolbar, there are tabs for 'Worksheet' and 'Query Builder', with 'Worksheet' selected. The main pane displays the SQL query:

```
SELECT gender,
COUNT(EmployeeID) Number_Of_Emp
FROM AKHAIRE3.employee
GROUP BY gender
HAVING COUNT (EmployeeID)>1
```

Below the query, the status bar shows 'All Rows Fetched: 2 in 0.003 seconds'. The results pane shows a table with two rows:

| | GENDER | NUMBER_OF_EMP |
|---|--------|---------------|
| 1 | M | 3 |
| 2 | F | 2 |

3.Retrieve Customer Name from Customer table where Order Number equals to 1003. (Akanksha Khaire)

SQL Statement: (Using Inner Join and Subquery)

--Retrieve Customer Name from Customer table where Order Number equals to 1003.

```
SELECT c.CustomerID, c.FirstName, c.LastName, o.OrderNumber
FROM BSUVAGI.customer c
INNER JOIN BSUVAGI.orders o ON c.CustomerID = o.CustomerID
WHERE o.ordernumber=
```

```
(SELECT OrderNumber
FROM BSUVAGI.orders o
WHERE OrderNumber=1003);
```

```
--Retrieve Customer Name from Customer table where Order Number equals to 1003.

SELECT c.CustomerID, c.FirstName, c.LastName, o.OrderNumber
FROM BSUVAGI.customer c
INNER JOIN BSUVAGI.orders o ON c.CustomerID = o.CustomerID
WHERE o.ordernumber=
(SELECT OrderNumber
FROM BSUVAGI.orders o
WHERE OrderNumber=1003); |
```

SQL Output:

| | CUSTOMERID | FIRSTNAME | LASTNAME | ORDERNUMBER |
|---|------------|-----------|----------|-------------|
| 1 | 3 | Akanksha | Khair | 1003 |

4. Display the order numbers and the number of product types placed for each order
(Bhumika Suvagia)

SQL Statement: (Using Group by and Order by)

```
SELECT OrderNumber, SUM(OrderedQuantity) AS Total_Product_Type
FROM akhaire3.OrderLine
GROUP BY OrderNumber
ORDER BY OrderNumber;
```

The screenshot shows the SSMS interface with a query window titled 'bsuvagi'. The query is:

```
SELECT OrderNumber, SUM(OrderedQuantity) AS Total_Product_Type
FROM akhaire3.OrderLine
GROUP BY OrderNumber
ORDER BY OrderNumber;
```

SQL Output:

| | ORDERNUMBER | TOTAL_PRODUCT_TYPE | |
|---|-------------|--------------------|--|
| 1 | 1001 | 3 | |
| 2 | 1002 | 5 | |
| 3 | 1003 | 1 | |

5.What are the top 2 best-selling manufactured beauty products by total amount, and how many units of each product were ordered? (Bhumika Suvagiya)

SQL Statement: (Using Inner Join, Group by, Having, Sum(), and Order by)

```
SELECT bp.ProductName, SUM(ol.OrderedQuantity) AS total_units_orders,
SUM(ol.OrderedQuantity * bp.Price) AS total_amount
FROM Orders o
INNER JOIN AKHAIRE3.orderline ol ON o.OrderNumber = ol.OrderNumber
INNER JOIN ASAVALI2.beauty_products bp ON ol.ProductID = bp.ProductID
WHERE bp.ProductType = 'M'
GROUP BY bp.ProductName
HAVING SUM(ol.OrderedQuantity * o.OrderAmount) > 200
ORDER BY total_amount DESC;
```

The screenshot shows the SSMS interface with a query window titled 'bsuvagi'. The query is the same as the one provided above:

```
SELECT bp.ProductName, SUM(ol.OrderedQuantity) AS total_units_orders, SUM(ol.OrderedQuantity * bp.Price) AS total_amount
FROM Orders o
INNER JOIN AKHAIRE3.orderline ol ON o.OrderNumber = ol.OrderNumber
INNER JOIN ASAVALI2.beauty_products bp ON ol.ProductID = bp.ProductID
WHERE bp.ProductType = 'M'
GROUP BY bp.ProductName
HAVING SUM(ol.OrderedQuantity * o.OrderAmount) > 200
ORDER BY total_amount DESC;
```

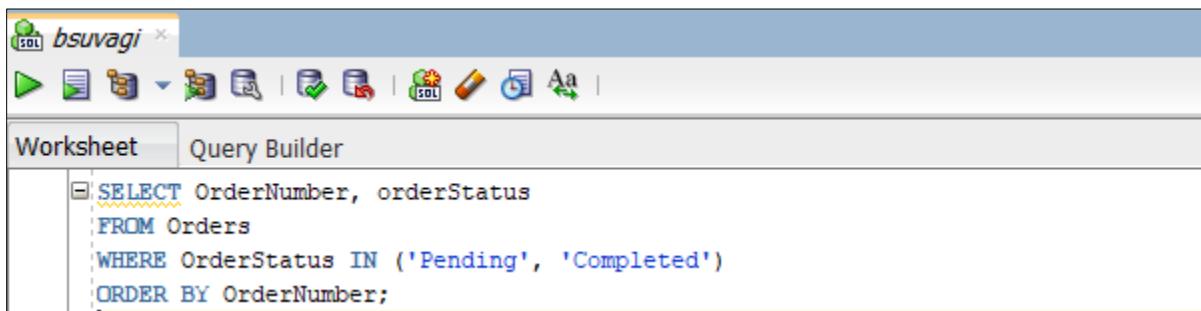

SQL Output:

| PRODUCTNAME | TOTAL_UNITS_ORDERS | TOTAL_AMOUNT |
|-------------------|--------------------|--------------|
| 1 Facial Cleanser | 3 | 26.97 |
| 2 Lipstick | 2 | 19.98 |

6. Display a list of orders with their order status, indicating whether they are pending or completed. (Bhumika Suvagia)

SQL Statement: (Using Order by)

```
SELECT OrderNumber, orderStatus  
FROM Orders  
WHERE OrderStatus IN ('Pending', 'Completed')  
ORDER BY OrderNumber;
```

```
bsuvagi  
Worksheet Query Builder  
SELECT OrderNumber, orderStatus  
FROM Orders  
WHERE OrderStatus IN ('Pending', 'Completed')  
ORDER BY OrderNumber;
```

SQL Output:

| ORDERNUMBER | ORDERSTATUS |
|-------------|----------------|
| 1 | 1001 Pending |
| 2 | 1002 Completed |
| 3 | 1004 Pending |
| 4 | 1005 Completed |

7. Display Top 3 Employees by Salary (Ankita Savaliya)

SQL Statement: (Using Common Type Expression and Subquery)

```
WITH CTE AS(  
SELECT row_number() Over (Order by Salary desc)rn,Salary ,EmployeeName
```

```

FROM AKHAIRE3.Employee)
SELECT EmployeeName, Salary
FROM CTE
WHERE rn <= 3

```

```

WITH CTE AS (
    SELECT row_number() OVER (Order by Salary desc)rn,Salary ,EmployeeName
    FROM AKHAIRE3.Employee)
    SELECT EmployeeName, Salary
    FROM CTE
    WHERE rn <= 3

```

SQL Output:

| | EMPLOYEE NAME | SALARY |
|---|----------------|--------|
| 1 | Teresa Butler | 56000 |
| 2 | Jeniffer Smith | 50000 |
| 3 | Gloria Jenkins | 45000 |

8.List Products details Whether it is Manufactured or Purchased? (Ankita Savaliya)

SQL Statement: (Using Union, Inner Join, Subquery, and Order by)

SELECT

B.ProductName, Case WHEN ProductType = 'M' then 'Manufactured' WHEN ProductType = 'P' then 'Purchased' END ProductType,A.company

FROM

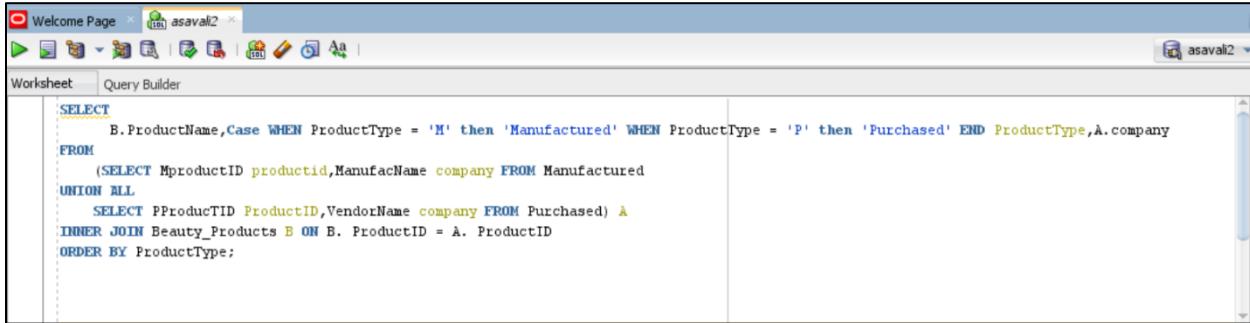

(SELECT M.productID productid, ManufacName company FROM Manufactured

UNION ALL

SELECT PProductID ProductID, VendorName company FROM Purchased) A

INNER JOIN Beauty_Products B ON B.ProductID = A.ProductID

ORDER BY ProductType;

The screenshot shows the Oracle SQL Developer interface. The title bar says "Welcome Page" and "asaval2". The main area is titled "Worksheet" and contains the following SQL code:

```
SELECT
    B.ProductName, Case WHEN ProductType = 'M' then 'Manufactured' WHEN ProductType = 'P' then 'Purchased' END ProductType,A.company
FROM
    (SELECT MproductID productid,ManufacName company FROM Manufactured
UNION ALL
    SELECT PProductID ProductID,VendorName company FROM Purchased) A
INNER JOIN Beauty_Products B ON B. ProductID = A. ProductID
ORDER BY ProductType;
```

SQL Output:

| PRODUCTNAME | PRODUCTTYPE | COMPANY |
|-------------------|--------------|--------------------|
| 1 Sunscreen | Manufactured | AB Beauty Products |
| 2 Facial Cleanser | Manufactured | AB Beauty Products |
| 3 Lipstick | Manufactured | AB Beauty Products |
| 4 Mascara | Purchased | Ziya Beauty Stores |
| 5 Hair Spray | Purchased | Sanya E-Beauty |

PL/SQL Blocks:

Functions:

1. Function for getting Full address by Customer ID: (Ankita Savaliya)

```
CREATE OR REPLACE FUNCTION get_complete_address(CustomerID IN Number)
RETURN VARCHAR2
IS Full_Address VARCHAR2(250);
BEGIN
SELECT
    C.Street ||' '|| C.City ||' '||C.State||'-'||PostalCode Full_Address
    INTO Full_Address
FROM BSUVAGI.Customer C
WHERE CustomerID = CustomerID;
RETURN(Full_Address);
END get_complete_address;
```

Calling the Function:

```
SELECT CustomerID, Firstname, Lastname, get_complete_address(CustomerID) AS  
Full_Address, PhoneNumber FROM BSUVAGI.Customer;
```

The screenshot shows the Oracle SQL Developer interface. In the top navigation bar, there are tabs for 'Welcome Page' and 'asavali2'. Below the tabs, there are icons for file operations like New, Open, Save, Print, and Undo/Redo. The main area is divided into two panes. The left pane contains the function definition:

```
CREATE OR REPLACE FUNCTION get_complete_address(CustomerID IN Number)  
  RETURN VARCHAR2  
  IS Full_Address VARCHAR2(250);  
  
BEGIN  
  SELECT  
    C.Street || ' ' || C.City || ' ' || C.State || '-' || PostalCode Full_Address  
    INTO Full_Address  
   FROM BSUVAGI.Customer C  
  WHERE CustomerID = CustomerID;  
  RETURN(Full_Address);  
END get_complete_address;  
  
--Calling the Function:  
SELECT CustomerID, Firstname, Lastname, get_complete_address(CustomerID) AS Full_Address, PhoneNumber  
  FROM BSUVAGI.Customer;
```

Output:

| | CUSTOMERID | FIRSTNAME | LASTNAME | FULL_ADDRESS | PHONENUMBER |
|---|------------|-----------|----------|--|----------------|
| 1 | 1 | Bhumika | Suvagia | 5022 S Power RD Mesa AZ-85212 | 555-1234 |
| 2 | 2 | Ankita | Savaliya | 3935 Grand Ave Chino Hills CA-91710 | 555-5678 |
| 3 | 3 | Akanksha | Khair | 2219 Park Ave Tustin CA-92782 | 555-9876 |
| 4 | 4 | Sara | Lee | 200 Towne Center Blvd Sanford FL-32771 | 555-5555 |
| 5 | 5 | David | Nguyen | 1201 F St Washington DC-20004 | 555-4321 |
| 6 | 6 | Jenny | Sammy | 356 OLD STEESE HWY FAIRBANKS AK-99701 | (907) 459-2355 |

2. Function for getting Order Status by Order ID: (Bhumika Suvagia)

```
CREATE OR REPLACE FUNCTION get_order_status
```

```
(OrderID IN orders.orderNumber%TYPE)
```

```
RETURN orders.orderstatus%TYPE
```

```
IS
```

```
  v_order_status orders.orderstatus%TYPE;
```

```
BEGIN
```

```
  SELECT Orderstatus INTO v_order_status
```

```
  FROM orders WHERE orderNumber = OrderID
```

```
  FETCH FIRST 1 ROWS ONLY;
```

```
  RETURN v_order_status;
```

```
END get_order_status;
```

```
Function GET_ORDER_STATUS compiled
```

```
-- Declare a bind variable
```

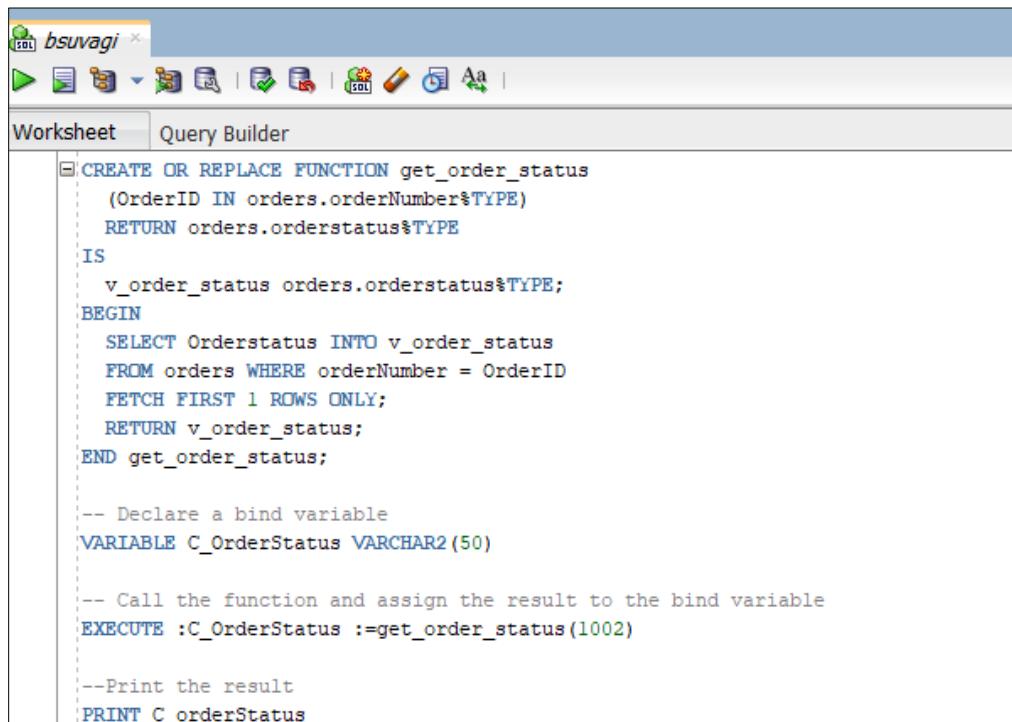

```
VARIABLE C_OrderStatus VARCHAR2(50)
```

```
-- Call the function and assign the result to the bind variable
```

```
EXECUTE :C_OrderStatus :=get_order_status(1002)
```

```
--Print the result
```

```
PRINT C_orderStatus
```

The screenshot shows a window titled 'bsuvagi' with a toolbar above it containing various icons. Below the toolbar, there are two tabs: 'Worksheet' (which is selected) and 'Query Builder'. The main area contains the following PL/SQL code:

```
CREATE OR REPLACE FUNCTION get_order_status
  (OrderID IN orders.orderNumber%TYPE)
  RETURN orders.orderstatus%TYPE
IS
  v_order_status orders.orderstatus%TYPE;
BEGIN
  SELECT Orderstatus INTO v_order_status
  FROM orders WHERE orderNumber = OrderID
  FETCH FIRST 1 ROWS ONLY;
  RETURN v_order_status;
END get_order_status;

-- Declare a bind variable
VARIABLE C_OrderStatus VARCHAR2(50)

-- Call the function and assign the result to the bind variable
EXECUTE :C_OrderStatus :=get_order_status(1002)

--Print the result
PRINT C_orderStatus
```

Output:

| |
|---------------|
| C_ORDERSTATUS |
| ----- |
| Completed |

3. Function for checking the product availability by Product Name: (Akanksha Khaire)

```
CREATE OR REPLACE FUNCTION check_product_availability(ProductName IN  
VARCHAR2)
```

```
RETURN VARCHAR2
```

```
IS
```

```
v_available VARCHAR2(10);
```

```
BEGIN
```

```
SELECT 'Available' INTO v_available
```

```
FROM ASAVALI2.beauty_products
```

```
WHERE productname = ProductName
```

```
FETCH FIRST 1 ROW ONLY;
```

```
RETURN v_available;
```

```
EXCEPTION
```

```
WHEN NO_DATA_FOUND THEN
```

```
RETURN 'Not Available';
```

```
END;
```

```
VARIABLE P_status VARCHAR2(20);
```

```
EXEC :P_status := check_product_availability('Sunscreen');
```

```
PRINT P_status;
```

The screenshot shows the Oracle SQL Developer interface with a worksheet tab selected. The code in the worksheet is as follows:

```

CREATE OR REPLACE PROCEDURE get_product_ingredients
(product_id IN ASAVALI2.beauty_products.ProductID%TYPE ,
ProductName OUT ASAVALI2.beauty_products.ProductName%TYPE,
P_ingredients OUT ASAVALI2.beauty_products.Ingredients%TYPE
)
IS
BEGIN
SELECT P.ProductName,P.Ingredients
INTO ProductName,P_ingredients
FROM ASAVALI2.beauty_products P
WHERE P.ProductID=product_id

4. Function for Getting Salary by Employee ID: (Ankita Savaliya)

```

CREATE OR REPLACE FUNCTION get_employee_salary
(employee_id IN AKHAIRE3.employee.EmployeeID%TYPE)
RETURN NUMBER
IS
    emp_salary AKHAIRE3.employee.Salary%TYPE:=0;
BEGIN

```

```

SELECT Salary INTO emp_salary
FROM AKHAIRE3.employee WHERE EmployeeID = employee_id;
RETURN emp_salary;
END get_employee_salary;

```

The screenshot shows the Oracle SQL Developer interface with a query window titled 'Worksheet'. The code entered is:

```

CREATE OR REPLACE FUNCTION get_employee_salary
(employee_id IN AKHAIRE3.employee.EmployeeID%TYPE)
RETURN NUMBER
IS
    emp_salary AKHAIRE3.employee.Salary%TYPE:=0;
BEGIN
    SELECT Salary INTO emp_salary
    FROM AKHAIRE3.employee WHERE EmployeeID = employee_id;

    RETURN emp_salary;
END get_employee_salary;

```

Function GET_EMPLOYEE_SALARY compiled

-- Declare a bind variable

VARIABLE b_Employee_Salary NUMBER

- Call the function and assign the result to the bind variable

exec :b_Employee_Salary :=get_employee_salary(2)

--Print the result

PRINT b_Employee_Salary

The screenshot shows the Oracle SQL Developer interface with a query window titled 'Worksheet'. The code entered is:

```

-- Declare a bind variable
VARIABLE b_Employee_Salary NUMBER

-- Call the function and assign the result to the bind variable
exec :b_Employee_Salary :=get_employee_salary(2)

--Print the result
PRINT b_Employee_Salary

```

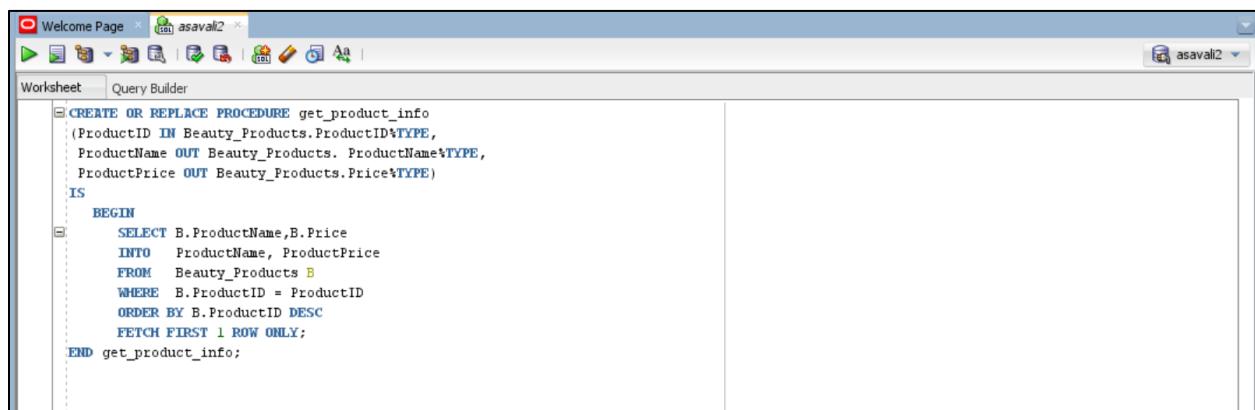

Output:

```
B_EMPLOYEE_SALARY
-----
30000
```

Procedures:

1. Procedure for getting Product Information by Product ID: (Ankita Savaliya)

```
CREATE OR REPLACE PROCEDURE get_product_info
(ProductID IN Beauty_Products.ProductID%TYPE,
ProductName OUT Beauty_Products. ProductName%TYPE,
ProductPrice OUT Beauty_Products.Price%TYPE)
IS
BEGIN

Object-Relational Database Management System (ORDBMS):

Create Customer information table with user defined object types and display customer full name using user-defined method. ([Ankita Savaliya](#))

This creates a type named ADD_ty that contains four attributes: Street, City, State, and PostalCode

```
CREATE TYPE ADD_ty AS Object  
  (Street VARCHAR2(50),  
   City VARCHAR2(25),  
   State CHAR(2),  
   PostalCode VARCHAR2(5));
```

Type ADD_TY compiled

This creates a type named CustName_ty that contains three attributes: Cust_Fname, Cust_Lname, and Cust_Mname

```
CREATE TYPE CustName_ty AS OBJECT (
```

```
Cust_Fname  VARCHAR2(25),
Cust_Lname  VARCHAR2(25),
Cust_Mname  CHAR(2));
```

The screenshot shows the Oracle SQL Developer interface with a worksheet tab selected. The code entered is:

```
CREATE TYPE CustName_ty AS OBJECT (
  Cust_Fname  VARCHAR2(25),
  Cust_Lname  VARCHAR2(25),
  Cust_Mname  CHAR(2));
```

Type CUSTNAME_TY compiled

This creates a table named Customer_Information with three columns: CustID, CustName, and Address

```
CREATE TABLE Customer_Information
(CustID NUMBER,
 CustName CustName_ty,
 Address ADD_ty);
```

The screenshot shows the Oracle SQL Developer interface with a worksheet tab selected. The code entered is:

```
CREATE TABLE Customer_Information
(CustID NUMBER,
 CustName CustName_ty,
 Address ADD_ty);
```

Table CUSTOMER_INFORMATION created.

Insert value using constructor functions for the CustName_ty and ADD_ty object types

```
INSERT INTO Customer_Information VALUES (101, CustName_ty ('Tommy', 'Ford', 'TF'),
ADD_ty ('3 Pine Street', 'Des Moines', 'IA', 52345));
INSERT INTO Customer_Information VALUES (102, CustName_ty ('Siya', 'Chopra', 'H' ),
ADD_ty ('2200 S ATLANTIC BL', 'LOS ANGELES', 'CA', '91754'));
```

```

INSERT INTO Customer_Information VALUES (101, CustName_ty ('Tommy', 'Ford', 'TF'),
ADD_ty ('3 Pine Street', 'Des Moines', 'IA', 52345));

INSERT INTO Customer_Information VALUES (102, CustName_ty ('Siya', 'Chopra', 'H '),
ADD_ty ('2200 S ATLANTIC BL', 'LOS ANGELES', 'CA', '91754'));

```

Display all the information in customer_information table

`SELECT * FROM customer_information;`

```

SELECT * FROM customer_information;

```

| CUSTID |
|--|
| ----- |
| CUSTNAME(CUST_FNAME, CUST_LNAME, CUST_MNAME) |
| ----- |
| ADDRESS(STREET, CITY, STATE, POSTALCODE) |
| ----- |
| 101 |
| CUSTNAME_TY('Tommy', 'Ford', 'TF') |
| ADD_TY('3 Pine Street', 'Des Moines', 'IA', '52345') |
| ----- |
| 102 |
| CUSTNAME_TY('Siya', 'Chopra', 'H ') |
| ADD_TY('2200 S ATLANTIC BL', 'LOS ANGELES', 'CA', '91754') |

Retrieve specific information from the customer_information table

`SELECT C.CustName.CUST_FNAME, C.ADDRESS.CITY, C.ADDRESS.State
FROM customer_information C;`

```

SELECT C.CustName.CUST_FNAME, C.ADDRESS.CITY, C.ADDRESS.State
FROM customer_information C;

```

Output:

| CUSTNAME.CUST_FNAME | ADDRESS.CITY | ADDRESS.STATE |
|---------------------|--------------|---------------|
| 1 Tommy | Des Moines | IA |
| 2 Siya | LOS ANGELES | CA |

Create a user-defined method reusing CustName_ty object

```
ALTER TYPE CustName_ty
```

```
ADD MEMBER FUNCTION get_full_name RETURN VARCHAR2 CASCADE;
```

```
CREATE OR REPLACE TYPE BODY CustName_ty AS
```

```
MEMBER FUNCTION get_full_name
```

```
RETURN VARCHAR2 IS
```

```
BEGIN
```

```
    RETURN(Cust_Fname || ' ' || Cust_Mname || ' ' || Cust_Lname);
```

```
END get_full_name;
```

```
END;
```

The screenshot shows the Oracle SQL Developer interface. In the top navigation bar, there are tabs for 'Welcome Page' and 'asaval2'. Below the tabs, there are icons for file operations like New, Open, Save, Print, and Database. The main window has two panes. The left pane is titled 'Worksheet' and contains the PL/SQL code for altering the type. The right pane is titled 'Query Builder' and is currently empty.

```
ALTER TYPE CustName_ty
ADD MEMBER FUNCTION get_full_name RETURN VARCHAR2 CASCADE;

CREATE OR REPLACE TYPE BODY CustName_ty AS
MEMBER FUNCTION get_full_name
RETURN VARCHAR2 IS
BEGIN
    RETURN(Cust_Fname || ' ' || Cust_Mname || ' ' || Cust_Lname);
END get_full_name;
END;
```

```
Type CUSTNAME_TY altered.
```

```
Type Body CUSTNAME_TY compiled
```

```
SELECT C.CustName.get_full_name () CUSTOMER_FULL_NAME, C.Address.City CITY
FROM Customer_Information C;
```

The screenshot shows the Oracle SQL Developer interface with the 'Worksheet' tab selected. The query window contains the following code:

```
SELECT C.CustName.get_full_name () CUSTOMER_FULL_NAME, C.Address.City CITY
FROM Customer_Information C;
```

Output:

| | CUSTOMER_FULL_NAME | CITY |
|---|--------------------|-------------|
| 1 | Tommy TF Ford | Des Moines |
| 2 | Siya H Chopra | LOS ANGELES |

VARRAY:

Inserting product ingredients: (Bhumika Suvagia)

```
CREATE TYPE ingredient_list_type AS VARRAY(10) OF VARCHAR2(50);
CREATE TABLE b_products ( product_id NUMBER, product_name VARCHAR2(50),
ingredients ingredient_list_type);
```

```
INSERT INTO b_products (product_id, product_name, ingredients)
VALUES (1, 'Lipstick', ingredient_list_type('Castor Oil', 'Beeswax', 'Red Dye #7'));
INSERT INTO b_products (product_id, product_name, ingredients)
VALUES (2, 'Facewash', ingredient_list_type('Humectants', 'Preservatives', 'Fragrance'));
```

```
SELECT * FROM b_products;
```

The screenshot shows the Oracle SQL Developer interface with the 'Worksheet' tab selected. The query window contains the following script:

```
CREATE TYPE ingredient_list_type AS VARRAY(10) OF VARCHAR2(50);
CREATE TABLE b_products ( product_id NUMBER, product_name VARCHAR2(50), ingredients ingredient_list_type);

INSERT INTO b_products (product_id, product_name, ingredients)
VALUES (1, 'Lipstick', ingredient_list_type('Castor Oil', 'Beeswax', 'Red Dye #7'));
INSERT INTO b_products (product_id, product_name, ingredients)
VALUES (2, 'Facewash', ingredient_list_type('Humectants', 'Preservatives', 'Fragrance'));

SELECT * FROM b_products;
```

Output:

| PRODUCT_ID | PRODUCT_NAME |
|--|--------------|
| <hr/> | |
| INGREDIENTS | |
| <hr/> | |
| 2 Facewash | |
| INGREDIENT_LIST_TYPE('Humectants', 'Preservatives', 'Fragrance') | |
